

MD ZUNAID ALI

Kolkata, India | +91 8252300728 | md.zunaid.ali244529@gmail.com

GitHub | LeetCode | GeeksforGeeks | CodingNinja | Portfolio

SKILLS

Programming Languages: Java, Python, PL/SQL

Cloud & Infrastructure: Oracle Cloud Infrastructure (OCI), Compute Instances, VCN, Load Balancer, Block Storage, IAM

Database & Administration: Oracle SQL, Oracle EBS Administration, SQL Query Optimization, Concurrent Processing

Backend & Frameworks: JDBC, Servlets, REST APIs, Spring Framework (Beginner)

Android Development: Android SDK, Firebase, Retrofit, MVVM Architecture

Tools & Platforms: Linux CLI, PuTTY, GitHub, ChatGPT, Cursor AI, GitHub Copilot

EXPERIENCE

Tata Consultancy Services (TCS)

2026 – Present

Systems Engineer / Oracle Cloud & DBA

Kolkata, India

- Administered Oracle E-Business Suite (EBS) in a live production environment, managing user accounts, responsibilities, and role-based access controls.
- Performed database administration and maintenance activities through Linux CLI using PuTTY, including patch deployment and system diagnostics.
- Executed and monitored backend concurrent processing tasks using SQL scripts to support operational workflows and maintain data consistency.
- Provisioned and configured Oracle Cloud Infrastructure (OCI) resources including Compute Instances, Block Volumes, and Virtual Cloud Networks (VCN).
- Implemented secure and highly available cloud architecture using OCI Load Balancers, IAM Policies, Compartments, Availability Domains, and Fault Domains.
- Collaborated with infrastructure and database teams to troubleshoot production issues and optimize backend performance.

Nagarro

Feb 2024 – Dec 2024

Android Developer Intern

Remote

- Developed high-performance Android applications using Java, XML, Material Design, and modern Jetpack components including LiveData, ViewModel, and Navigation, following MVVM architecture for scalable and maintainable development.
- Integrated backend services using Retrofit REST APIs and Firebase services such as Authentication, Firestore, and Realtime Database to implement secure user authentication, onboarding workflows, and dynamic application navigation.
- Optimized application performance using lifecycle-aware components, custom RecyclerView implementations, and Room Database for efficient local data storage, improving UI responsiveness and application stability.
- Collaborated within Agile/Scrum development teams, contributing to feature implementation, debugging, testing, and continuous performance enhancements throughout the development lifecycle.

PROJECTS

Raja Enterprises Luxury Showroom Web Application

Technology used: React, Vite, Tailwind CSS, Supabase

- Developed a premium luxury appliance showroom web application using React, Vite, Tailwind CSS, Zustand, Framer Motion, and Supabase for scalable and responsive user experiences.
- Implemented secure authentication, wishlist management, dynamic product filtering, and WhatsApp-based enquiry workflows integrated with Supabase Auth and PostgreSQL.
- Designed and developed an admin dashboard supporting product management, enquiry handling, category management, brand control, and real-time application updates.
- Optimized frontend performance using lazy loading, image compression, IntersectionObserver-based rendering, and efficient state management techniques.
- Integrated EmailJS notifications, protected routes, role-based admin access, and cloud-backed storage architecture for enterprise-grade usability and maintainability.

L-Ray Treat Bakery E-Commerce Application

Technology used: React, Tailwind CSS, Supabase, Zustand

- Engineered a **full-stack bakery e-commerce platform** delivering a fully responsive user interface optimized across **100%** of mobile, tablet, and desktop devices.
- Integrated **Supabase Backend-as-a-Service (BaaS)** with secure JWT-based authentication and real-time database operations, reducing backend development effort by approximately **40%**.
- Optimized application state management using **Zustand**, reducing unnecessary component re-renders by nearly **30%** and improving dynamic menu update performance.
- Designed a scalable product catalog supporting **50+ menu items** with efficient React Router DOM navigation, decreasing page transition times to under **200ms**.

- Improved frontend performance and maintainability using **Vite**, achieving nearly **10x faster Hot Module Replacement (HMR)** and reducing production bundle size by approximately **15%**.

Food Donation and Resource Management Application

Technology used: Java, Android SDK, Firebase, REST APIs

- Developed an Android-based donation management application aimed at reducing food wastage and supporting sustainable resource distribution for NGOs, orphanages, and needy communities.
- Designed workflows enabling restaurants, cafes, and individuals to donate surplus food, clothes, books, and essential resources through real-time donation coordination and request management.
- Implemented authentication systems, donation tracking, navigation workflows, and backend data handling using Firebase services and REST APIs for secure and scalable operations.
- Built scalable Android architecture using Java, MVVM design principles, and Firebase integration to streamline donation lifecycle management and improve user accessibility.
- Focused on sustainability-driven problem solving by creating a platform that minimizes food wastage, reduces environmental impact, and improves community resource utilization.

EDUCATION

Institute of Engineering and Management (IEM)	2021 – 2025
<i>Bachelor of Technology in Computer Science & Engineering</i>	<i>DGPA: 8.58</i>

CERTIFICATIONS

- Oracle Cloud Infrastructure (OCI) Foundations Associate Certification
- SQL and Relational Database Management Certification
- AWS Cloud Practitioner Essentials
- Introduction to Data Analytics
